## SKILLS

---

|                 |                                                               |
|-----------------|---------------------------------------------------------------|
| Languages       | JavaScript, TypeScript, Java, Golang.                         |
| Frameworks      | Express.js, React.js, Next.js.                                |
| Databases       | MongoDB, MySQL, Redis, Supabase.                              |
| DevOps          | Docker, CI/CD, Microservices, Serverless Architecture, Linux. |
| Developer Tools | Cursor, Git, GitHub, Postman, WebSockets.                     |

## EXPERIENCE

---

**Aonflow – Backend Engineer** Oct 2025 - Jan 2026

- Developed and maintained Shopify connector integrations for fetching, processing, and synchronizing store data using GraphQL APIs.
- Built a web scraper to fetch and process QuickBooks entities, reducing metadata dependency usage and improving the overall entity load times by 40%.
- Implemented OAuth 2.0 authentication and integrated QuickBooks APIs for secure data synchronization and automated workflows.
- Optimized entity synchronization time by replacing nested iteration logic with hash-based lookups, reducing time complexity of the algorithm from  $O(n^2)$  to  $O(n)$  and significantly improving the speed.
- Tech Stack: Node.js, Express.js, JavaScript, Python, MongoDB, MySQL, Docker, GraphQL APIs.

**Aonflow – Backend Engineer Intern** Mar 2025 - Sep 2025

- Built Odoo connector modules from scratch to handle bidirectional data flow and automated synchronization.
- Implemented sync reconciliation logic to detect and remove stale entities during refresh cycles, ensuring database consistency with external application data.
- Monitored and optimized high-latency APIs across multiple workflows, reducing average response time by approximately 40% and improving overall platform performance.

**CRPTM – Full-Stack Developer Intern** Sep 2024 - Feb 2025

- Resolved frontend and backend production bugs across core platform modules, improving application stability and user experience.
- Debugged and fixed authentication and integration issues related to Bibox and Gemini.
- Implemented taxation logic and improved overall transaction processing based on business requirements for calculating taxations
- Tech Stack: Next.js, Java, Spring Boot, Microservices Architecture, Docker, MySQL.

## PROJECTS

---

**MonkArena** - A collaborative habit tracking platform featuring real-time daily activity logging, private customizable rooms to track activity of your friends, and competitive leaderboards, actively used by 15+ users. Built with React and Supabase. ([Live](#))

**Blogster** - A serverless blogging platform enabling users to create, publish, and manage content through a scalable edge-based architecture, optimized for performance and seamless user experience. Built with React.js, Hono.js, Cloudflare Workers, Prisma, PostgreSQL, and TypeScript. ([Live](#))

**Leo.ai** - An AI-powered GitHub workflow assistant that monitors pull request activity through webhooks, generates contextual summaries using Gemini API, and delivers real-time updates directly to Discord channels. Built with Motia.dev, JavaScript, GitHub Webhooks, Discord Webhooks, and Gemini API. ([Code](#))

## EDUCATION

---

**Bachelor of Computer Applications, MMDU – 7.7 CGPA**

Sept 2022 - Jul 2025
